/note="Vector: pBe10BAC11; Site 1: HindIII; Rice is one of two most popular grains In the world half of the world population especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate. Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 431 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare variety. The library contains 36,864 clones with an average insert size of 128.5 Kb providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Two high density filters, each containing 18,432 clones (doubly spotted), represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1173 GTCAGAATGGGAGAAATTCTATGAACACCTTCCTTCAGAACTAGAAATAAACCCAAGCCT 1232

/lab host="Jano" or DHSa" /clone lib="WGS-SbicolorF (JM107 adapted methyl filtered)" /clone lib="WGS-SbicolorF (JM107 adapted methyl filtered)" /note="Site 1: Xba I; Site 2: Xba I; The vector was digested with Xbal and one nucleotide was added by fill in in the recessive 3' end. The genomic DNA was nebulized, end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (.x/y reads in M13mpl9, .b/g reads in µUC19). The same ligation was transformed in either JM107 or DH5a."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GACCCAAGAGTCTAG------CACATGCAGTTTGTCCAGATCAATTGAGGATGT 1735

Sequence 68, Application US/09336946B

Patent No. 6479731

GENERAL INFORMATION:

APPLICANT: Valent, Barbara S.

APPLICANT: Bryan, Gregory

APPLICANT: E. I. du Pont de Nemours and Company

APPLICANT: B. I. du Pont de Nemours and Company

APPLICANT: B. I. du Pont de Nemours and Company

TITLE OF INVENTION: A PI-ta GENE CONFERRING DISEASE RESISTANCE TO PLANTS

FILER REFERENCE: BB-1136

CURRENT APPLICATION NUMBER: US/09/336,946B

CURRENT APPLICATION NUMBER: 60/095229

PRIOR FILING DATE: 1998-06-04

NUMBER OF SEQ ID NOS: 74

SOFTWARE: Microsoft Office 97

Sequence 57, Application US/09993170

Patent No. 6743969

GENERAL INFORMATION:
APPLICANT: Bryan, Gregory
TITLE OF INVENTION: Modification of a Plant Disease Resistance Gene
TITLE OF INVENTION: Specificity and Method for Engineering Altered
TITLE OF INVENTION: Specificity and Method for Engineering Altered
TITLE OF INVENTION: Specificity
FILE REPERENCE: BB1385 US NA
CURRENT PAPLICATION NUMBER: US/09/993,170

CURRENT FILING DATE: 2001-11-4

PRIOR FILING DATE: 2001-11-4

NUMBER OF SEQ ID NOS: 60

SOFTWARE: Microsoft Office 97

SET DATE: 5222

TYPE: DNA

Sequence 1, Application US/09336946B

Patent No. 6479731

GENERAL INFORMATION:

APPLICANT: Baryan, Gregory

APPLICANT: Baryan, Gregory

APPLICANT: Bryan, Gregory

TILE OF INVENTION: A Pi-ta GENE CONFERRING DISEASE RESISTANCE TO PLANTS

FILE REFERENCE: BB-1136

CURRENT APPLICATION NUMBER: US/09/336,946B

CURRENT FILING DATE: 1999-06-21

PRIOR APPLICATION NUMBER: 06/095229

PRIOR FILING DATE: 1998-08-04

NUMBER OF FILING DATE: 1998-08-04

NUMBER OF SEQ ID NOS: 74

## ALIGNMENTS

```
The invention relates to novel broad-spectrum resistance gene Pi2 and the NSS(1-6) genes present in the Pi2 gene cluster region. The rice Pi2-like disease resistance nucleic acid molecules are useful for enhancing disease resistance in plants. The present sequence represents a rice NBS4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New rice Pi2-like disease resistance nucleic acid molecule that confers disease resistance in plants, useful for creating or enhancing disease
